

SL-UGW (Universal Gateway) Integrate Third Party Product or System

Application details

The Universal Gateway has many applications, including using it to integrate a third-party product into a system.

A third-party product is connected via GPIO or MODBUS to the Universal Gateway.

This enables wireless control via SATCOM to Star2M to control and monitor the third-party product or system.

Easy set-up is standard and available via the Universal Gateway Configurator Application.

Contact your Sealite Sales representative to learn more about the Universal Gateway.

UGW interfaces used in this application:

- Serial configuration interface via USB
- Satellite communication (SATCOM) interface
- MODBUS TCP/IP
- MODBUS RTU via RS-485
- Discrete IO via general-purpose input/outputs

Min UGW Firmware version: S100

Note: This application can be used in conjunction with other applications and notes.
